

Chair Designing Exercise

Chairs or seats come in many shapes and sizes. The chair shown below is a Dentists chair, this chair has been designed in such a way that it suits the job the dentist requires it to do. There are many other types of chair which have to be designed to suit the many situations where they appear or are used.

Your task is to come up with ideas for chairs in the following situations.

Doctors waiting room.

Chair for a computer user.

Chair for an elderly person.

Chair for a baby in a restaurant.

Chair for you to relax in at home.

Chairs for a family waiting in an airport

For each design you will need to sketch your design onto your paper and indicate by making small notes, some of the features each chair has. A small note can go a long way towards explaining a lot of the detail on a drawing.

You will get an A3 piece of paper to do your designs on. Each side of the paper should have 3 designs on it.

Your designs should show clearly how your design solves the problem of each type of seat.
