1 Answer all the questions.

2 Read every question carefully before you answer.

3 Write your answers in the spaces provided.

4 Do not write in the margins.

5 Do not sketch in ink.

6 All dimensions are given in millimetres.

7 **Show all working and units where appropriate.**

8 Reference should be made to the Standard Grade and Intermediate 2 Data Booklet (2008 edition) which is provided.

9 Before leaving the examination room you must give this book to the Invigilator. If you do not, you may lose all the marks for this paper.
[BLANK PAGE]
1. A street lighting system is controlled automatically. When the outside light drops below a set level a lamp comes on.

   (a) Complete the diagram below.

   (b) State the name of this type of diagram.

   (c) Describe the function of an error detector.

   [Turn over
2. A prototype electronic circuit is shown below.

(a) State the full name of an LDR.

The variable resistor and the LDR form a voltage divider sub-system.

(b) Describe the operation of the voltage divider sub-system.

(c) (i) Determine, with reference to the Data Booklet, the resistance of the LDR at 300 lux.

(ii) Calculate $V_{out}$ from the voltage divider sub-system at 300 lux.
2. (continued)

(d) Complete the circuit diagram to show how a diode could be used to protect the transistor from back-voltage (e.m.f).

(e) The transistor is fully switched on when $V_{BE}$ is 0.7 V.

(i) State the name given to this condition.

(ii) The symbol for a transistor is shown below. Label the connections 1 and 2.

(f) (i) Explain why a relay is often used with electronic circuits.

(ii) A DPST (double pole single throw) relay is used in the circuit. State the names of the types of relays shown below.

(iii) State the name of the relay type which would allow forward and backward control of a motor.
3. A pneumatic circuit is used to serve tennis balls during practice sessions. The system will serve automatically when a lever is actuated or manually each time a button is pressed. There is a delay between each ball being served.

(a) Complete the piping of the pneumatic circuit.

(b) State the full name of the following components.

(i) Component ①

(ii) Valve ①
3. (continued)

The piston below **instrokes** when air is supplied at a pressure of 0·5 N/mm² to the cylinder.

(c) Calculate the instroking force.

(d) Describe two ways of reducing the **outstroking** force applied by a piston.

1 __________________________________________

2 __________________________________________

[Turn over]
4. A microcontroller is used to operate an automatic window cleaning system. The flowchart for a sub-procedure used to control the system is shown below.
4. (continued)

Input and output connections to the microcontroller are shown in the table below.

<table>
<thead>
<tr>
<th>Input Connection</th>
<th>Pin</th>
<th>Output Connection</th>
</tr>
</thead>
<tbody>
<tr>
<td></td>
<td>7</td>
<td>Cleaning Head Up</td>
</tr>
<tr>
<td></td>
<td>6</td>
<td>Cleaning Head Down</td>
</tr>
<tr>
<td></td>
<td>5</td>
<td>Carriage forward</td>
</tr>
<tr>
<td></td>
<td>4</td>
<td></td>
</tr>
<tr>
<td></td>
<td>3</td>
<td></td>
</tr>
<tr>
<td></td>
<td>2</td>
<td></td>
</tr>
<tr>
<td></td>
<td>1</td>
<td></td>
</tr>
<tr>
<td>Sensor</td>
<td>0</td>
<td></td>
</tr>
</tbody>
</table>

Complete, with reference to the Data Booklet, flowchart and the input/output table, the PBASIC control program for sub-procedure ‘CLEAN’.

```plaintext
init:  symbol counter = b0

clean: 'set for . . . next loop to 3
       'cleaning head down
```
5. A car manufacturer has produced an electric sports car.

The car’s batteries are charged for 20 minutes from a 120 V supply providing 7 A.

(a) Calculate the electrical energy supplied.

The batteries provide 23 kW but the electric motor only produces 17.8 kW of useful output power.

(b) (i) Calculate the efficiency of the electric motor.

(ii) Explain why the electric motor is not 100% efficient.
5. (continued)

(c) Explain why it is important to make systems as efficient as possible.

Electrical energy can be generated from a variety of different sources.

(d) (i) State two examples of finite energy sources.

1. 
2. 

(ii) Explain the advantages (other than cost) of using renewable energy sources.

[Turn over
6. The following logic diagram is required for an electronic alarm system.

(a) Develop the Boolean expression for \( Z \), in terms of \( A \), \( B \) and \( C \).

\[
Z = \quad \text{[expression]} 
\]

(b) Complete the truth table below for the logic diagram.

<table>
<thead>
<tr>
<th>A</th>
<th>B</th>
<th>C</th>
<th>Z</th>
</tr>
</thead>
<tbody>
<tr>
<td>0</td>
<td>0</td>

<td>0</td>
<td>1</td>
</tr>
<tr>
<td>1</td>
<td>1</td>
<td>1</td>
<td>1</td>
</tr>
</tbody>
</table>
6. (continued)

A wiring diagram for the circuit is shown below.

(c) Explain why a resistor is placed in series with an LED.

(d) The following table compares characteristics of TTL and CMOS. Complete the table to match the characteristics to the correct Integrated Circuit (IC) family.

<table>
<thead>
<tr>
<th>Characteristic</th>
<th>TTL</th>
<th>CMOS</th>
</tr>
</thead>
<tbody>
<tr>
<td>Large fan out</td>
<td></td>
<td>✓</td>
</tr>
<tr>
<td>Higher power consumption</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Easily damaged by static electricity</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Faster switching speed</td>
<td></td>
<td></td>
</tr>
<tr>
<td>Can use supply voltages from 3–18 V</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
7. Manufacturing companies often use microcontrollers instead of hardwired electronic circuits.

(a) State the full name of EEPROM as used in a microcontroller.

(b) Complete the following table to describe the function and a characteristic of the named microcontroller sub-systems.

<table>
<thead>
<tr>
<th>Name</th>
<th>Function</th>
<th>Characteristic</th>
</tr>
</thead>
<tbody>
<tr>
<td>ROM</td>
<td><em>Stores PBASIC language for microcontroller operations.</em></td>
<td><em>Data remains after power is switched off.</em></td>
</tr>
<tr>
<td>RAM</td>
<td></td>
<td></td>
</tr>
<tr>
<td>EEPROM</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
7. (continued)

A microcontroller is used to vary the speed of a fan in an air-conditioning system.

(c) (i) Describe, using appropriate terminology, how Pulse Width Modulation (PWM) could be used to control the speed of a d.c. motor. You may use a sketch to illustrate your answer.

(ii) Describe an advantage of using PWM to control a motor’s speed.
8. A contestant in a weight-lifting competition is required to complete a “barrel lift”. A simplified diagram is shown below.

(a) Calculate the size of the lifting force \( F \). (Take moments about the pivot point.)

(b) Describe two ways of reducing friction at a pivot point.

1

2
8. (continued)

In order to set up some equipment a winching system is used.

(i) Calculate the **linear** speed of the load as it is raised. (Ignore the thickness of the rope.)

(ii) State the name of the two parts of the mechanism that links the motor and the drum.

Part A

Part B

(d) State the name of a mechanism that could be used to convert:

(i) rotational to linear motion;

(ii) reciprocating into rotational motion.
